Guidelines for completing allergen form

Survey your ingredient suppliers e.g. by using a similar form as attached. If an ingredient contains any of the following allergenic components, this should be declared on the attached form. From the information provided by your supplier or through analysis, determine whether the component contains **any** allergenic source and list the source on the form.

EXAMPLE: Soya sauce (soybeans, wheat and water): list soy and wheat protein.

Cereals containing gluten and products thereof

Includes but is not limited to wheat germ, wheat germ oil, wheat starch, semolina, durum flour, wheat flour, hydrolysed wheat protein, farina, pasta, macaroni products, cracker meal, vinegar made from wheat, rye, barley, oats, spelt, kamut or their hybridised strains. Also include caramel, sugars and acids derived from cereals e.g. dextrose, maltodextrins, acetic, lactic, ascorbic and citric acids which belong to this category.

Crustacean and products thereof

Includes but is not limited to crab, lobster, shrimp, oysters, prawns, crayfish, abalone, mussels, clams, scallops, squid, etc. List actual variety. Do not use generic names.

Egg and products thereof

Includes but is not limited to egg whites, egg yolks, whole eggs, egg lecithin, egg albumin.

Fish and products thereof

Includes but is not limited to any fish with fins such as codfish, turbot, halibut, anchovies (common in Worcestershire sauce), etc. Listing should contain actual fish name, not just a generic "fish extract".

Peanuts and products thereof

Includes but is not limited to peanuts, peanut meal, peanut butter, hydrolysed peanut protein and peanut oil including oil which has been bleached, refined, heat extracted, etc.

Soybeans and products hereof

Includes but is not limited to soya protein, soya protein concentrate, soya lecithin, hydrolysed soya protein, soya sauce, (soya bean/water), and any soya bean oil including oil that has been bleached, refined or heat extracted.

Milk or products thereof

BRIEF MANUFACTURING PROCESS OF ETHYL VANILLIN (FCC GRADE)

Guaethol is reacted with Glyoxalic Acid in presence of alkali which is further oxidised to give reaction mass of Ethyl Vanillin.

The reaction mass is then distilled to get Crude Ethyl Vanillin which is then purified with Ethanol and water to give Ethyl Vanillin FCC grade.
