Annex III of (EC) No. 1223/2009 identifies certain substances whose presence must be declared<sup>1</sup> in the list of ingredients referred to in Article 19(1)(g) of the regulation. The listing of these substances resulted from their identification by the Scientific Committee on Consumer Safety (SCCS) in their June 2012 opinion (SCCS/1459/11). On 26 July 2023, the European Commission published an amendment (Commission Regulation (EU) No. 2023/1545) updating the list to include additional substances.

The new list of substances defined as fragrance allergens by the EU with their corresponding reference number in Annex III can be found in the Appendix of this statement. While we do not actively monitor for all of these substances, we can offer the following information. The above-referenced product contains the following substances requiring listing in the ingredients of a finished product:

| Fragrance Substance (INCI Name) | CAS No.  | Concentration <sup>2</sup>                              | Annex III Ref. No. |
|---------------------------------|----------|---|--------------------|
| Benzyl alcohol                  | 100-51-6 | > 99.8 %  | 45                 |
| Benzaldehyde                    | 100-52-7 | May be present as an unintentional impurity at < 0.15 % | 330                |

It is our expectation that the inclusion of our material in a finished product by a downstream user would result in a reduction of the overall percent composition of each component provided by LANXESS Corporation. Based on knowledge of our raw materials and manufacturing process, we are able to state that no other substances from this list are expected to be present in the above-referenced product at levels relevant to this regulation’s disclosure requirements.
