## Product Information

### L(+)-Lactic Acid

Food Grade

#### General Information

Lactic acid is an organic acid occurring naturally in the human body and in fermented foods. The commercial production of lactic acid is typically done by fermentation. There are two optical forms of lactic acid existing whereby Jungbunzlauer has chosen to produce pure L(+)-lactic acid by traditional fermentation of carbohydrates. L(+)-lactic acid is better metabolised.

Jungbunzlauer L(+)-lactic acid is a mild tasting acidity regulator with flavour enhancing and antibacterial and antiviral properties. It can be used in a wide range of food, personal care and chemical products. Jungbunzlauer L(+)-lactic acid is vegan and manufactured from renewable raw materials without the use of GMO.

#### Characteristics

Jungbunzlauer L(+)-lactic acid is a colourless to yellowish, nearly odourless, syrupy liquid with a mild acid taste. It is commercially available as aqueous solutions of various concentrations. These solutions are stable under normal storage conditions.

L(+)-lactic acid is non-toxic to human and the environment, but concentrated solutions of L(+)-lactic acid can cause skin corrosion and eye damage. They have thus to be labelled with a hazard pictogram and related statements. L(+)-lactic acid falls under the dangerous goods definition and carries the UN number 3265 (Corrosive liquid, acidic, organic, n.o.s. (lactic acid)).

L(+)-lactic acid is readily biodegradable.

#### Legal Aspects

In Europe, lactic acid is listed as a generally permitted food additive (E 270) and may be added to all foodstuffs, following the “quantum satis” principle, as long as no special regulation restricts the use.

The US Food and Drug Administration (FDA) affirmed lactic acid as GRAS (generally recognized as safe) substance and permitted the use in food except infant food with no limitation other than current good manufacturing practice for use as antimicrobial agent, curing or pickling agent, flavor enhancer, flavoring agent or adjuvant, pH control agent, solvent or vehicle (CFR § 184.1061).

L(+)-lactic acid is classified and labelled according to GHS (Globally Harmonized System), implemented by the European Regulation (EC) No 1272/2008 on Classification, Labelling and Packaging of Substances and Mixtures (CLP Regulation) as follows:

Pictogram:	Signal Word:	Hazard statement:	Precautionary statements:

P501 Dispose of contents/ container to an approved waste disposal plant.

### Packaging and Storage

Jungbunzlauer L(+)-lactic acid is currently supplied in bulk, in intermediate bulk containers (IBCs) with 1200 kg net weight (1100 kg net for 50% solution), in drums with 250 kg net weight (240 kg net for 50% solution) and small drums with 25 kg net weight. We recommend not to triple stack the pallets. Our L(+)-lactic acid packaging conforms to the UN packaging group III.

Jungbunzlauer guarantees a shelf life of 36 months from production date for L(+)-lactic acid if the product is stored in its original packaging at temperatures between 5 and 30 °C.

L(+)-lactic acid has to be stored as corrosive material. The relevant regulations for storing hazardous materials are not harmonised but defined individually by each country (e.g. Code de l'Environnement/ICPE in France, GefStoffVO/TRGS 510 in Germany, PGS15 in the Netherlands, MIEAPQ in Spain, COSHH in the UK). Please check your local requirements.

### Standards and Certificates

Jungbunzlauer L(+)-lactic acid is Halal certified. A Halal certificate is available on request.

Jungbunzlauer L(+)-lactic acid is Kosher certified. A Kosher certificate is available on request. The Kosher certified Jungbunzlauer products carry a Kosher U on the original packaging.

Kosher product in bulk is supplied as follows:

- For deliveries in bulk tank truck there is a specific (Kosher) material number, since the tank truck for transport of bulk Kosher material has to be maintained by Kosher wash.

In the case of contact with eyes, rinse immediately with plenty of water and seek medical advice.  
Continue rinsing eyes during transport to hospital.  
Remove contact lenses.  
Protect unharmed eye.  
Keep eye wide open while rinsing.  
If eye irritation persists, consult a specialist.
- If swallowed : Clean mouth with water and drink afterwards plenty of water.  
Keep respiratory tract clear.  
Do NOT induce vomiting.  
Do not give milk or alcoholic beverages.  
Never give anything by mouth to an unconscious person.  
If symptoms persist, call a physician.  
Take victim immediately to hospital.

### SECTION 4. FIRST AID MEASURES

- General advice : Move out of dangerous area.  
Consult a physician.  
Show this safety data sheet to the doctor in attendance.  
Do not leave the victim unattended.
- If inhaled : If breathed in, move person into fresh air.  
No artificial respiration, mouth-to-mouth or mouth to nose. Use suitable instruments/apparatus.
- If unconscious, place in recovery position and seek medical advice.  
If symptoms persist, call a physician.
- In case of skin contact : Immediate medical treatment is necessary as untreated wounds from corrosion of the skin heal slowly and with difficulty.  
If on skin, rinse well with water.  
If on clothes, remove clothes.
- In case of eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes.
- Small amounts splashed into eyes can cause irreversible tissue damage and blindness.  
In the case of contact with eyes, rinse immediately with plenty of water and seek medical advice.  
Continue rinsing eyes during transport to hospital.  
Remove contact lenses.  
Protect unharmed eye.  
Keep eye wide open while rinsing.  
If eye irritation persists, consult a specialist.
- If swallowed : Clean mouth with water and drink afterwards plenty of water.  
Keep respiratory tract clear.  
Do NOT induce vomiting.  
Do not give milk or alcoholic beverages.  
Never give anything by mouth to an unconscious person.  
If symptoms persist, call a physician.  
Take victim immediately to hospital.

## Production Flow Chart Lactic Acid

### Fermentation Process

Jungbunzlauer L(+)-lactic acid is manufactured by the natural process of fermentation of glucose syrup derived from maize by enzymatic conversion, using a bacterial strain. Since fermentation requires a specific pH, the fermentation step includes pH adjustment. No other solvents than water nor catalysts are used during the complete process.

### Downstream Process

After completion of the fermentation, the broth is filtered to separate the buffered lactic acid from biomass and concentrated by evaporation of water. After a second pH adjustment step, the lactic acid is purified by adsorption and decolourized with activated carbon. Thereafter, the lactic acid concentration is further increased by evaporation of water. The final purification step is a distillation which leads to a high purity concentrated lactic acid. Pure concentrated lactic acid solution is then diluted with water to the targeted concentrations.

### Storage conditions

Jungbunzlauer lactic acid, lactates and lactate blends should be stored in their original packaging or in tight containers.

Recommended storage temperature: 5 – 30 °C. Please avoid exposure to direct sunlight.

Lactic acid incl. lactic acid buffered has to be stored as corrosive material. The relevant regulations for storing hazardous materials are not harmonised but defined individually by each country (e.g. Code de l'Environnement/ICPE in France, GefStoffVO/TRGS 510 in Germany, PGS15 in the Netherlands, MIEAPQ in Spain, COSHH in the UK). Please check your local requirements. This does not apply to lactates and lactate blends.

We recommend not to triple stack the pallets.

## Shelf life

A shelf life of **X** years (till end of the month) from the date of manufacturing has been defined for above mentioned products (please see Table: Overview of Shelf Life).

This shelf life is guaranteed if the product is stored in original packaging under storage conditions as mentioned above. In the calculation of the shelf life, short-term deviation from the recommended storage conditions during transport of the product have been taken into consideration. The shelf-life is conditional upon compliance at all times by the customer with the above mentioned storage conditions.

Physical properties may change on prolonged storage, thus a retest is recommended after the mentioned shelf life period.

**Table: Overview of Shelf Life**

Basel, March 19<sup>th</sup>, 2020

Dear customers

The following Jungbunzlauer product

- **L(+)-Lactic Acid**

is manufactured by fermentation of carbohydrates containing raw materials like glucose syrup derived from non-GMO maize.

The following Jungbunzlauer products are manufactured from **L(+)-Lactic Acid** as the main raw material:

- **L(+)-Lactic Acid Buffered**
- **Sodium L(+)-Lactate**
- **Potassium L(+)-Lactate**
- **Potassium L(+)-Lactate/Sodium Acetate**
- **Potassium L(+)-Lactate/Sodium Diacetate**
- **Potassium L(+)-Lactate/Potassium Acetate**
- **Potassium L(+)-Lactate/Potassium Diacetate**
- **Potassium L(+)-Lactate/Vinegar**
- **Sodium L(+)-Lactate/Sodium Diacetate**

Lactates are manufactured through neutralization of L(+)-lactic acid with a sodium or potassium source. Lactate blends are manufactured by blending of sodium lactate or potassium lactate with acetic acid partly or completely neutralised with caustic soda or caustic potash or with vinegar.

The above mentioned products are manufactured in the following Jungbunzlauer plant:

- **Jungbunzlauer S.A**  
**Z.I. et Portuaire, B.P. 32**
