are either manufactured by fermentation of glucose syrup derived from corn or further processing (e.g. neutralisation, esterification, agglomeration, coating, blending etc.). The products undergo several purification steps and are finally obtained in their highly pure form.

To the best of our knowledge, the manufacturing processes of the above mentioned products do not leave any contaminants or by-products known to the State of California to cause cancer or reproductive toxicity as listed under Proposition 65 State Drinking Water and Toxic Enforcement Act (last update 27 January 2023), except of unavoidable traces of heavy metals.

Heavy metals are regularly tested. Typical data are available on request.
