Microorganisms – production strains

Jungbunzlauer does not use genetically modified production strains

Fermentation Raw Materials Identity Preserved

Jungbunzlauer works solely with raw material suppliers who can exclude the processing of genetically modified organisms (GMO).

Jungbunzlauer purchases raw materials (example: glucose syrup) upon a NON-GMO agreement, if they are derived from crops for which genetically modified varieties exist (example: corn).

Glucose syrup from corn is manufactured in dedicated plants at our production sites Pernhofen (Austria) and Marckolsheim (France). We have agreements with all suppliers that only GMO free corn is delivered. Suppliers of corn need to have a traceability system in place.

We confirm that Jungbunzlauer products meet all applicable requirements of the U.S. Department of Agriculture (USDA) National Bioengineered Food Disclosure Standard (7 CFR Part 66) and are exempt from disclosure requirements.

The information contained herein has been compiled carefully and reflects the current status. We do not accept any responsibility or liability for the information given. Jungbunzlauer may not automatically notify about information updates or minor changes.
