

Ecology Statement

Biodegradability according to OECD 301 A-F EU OECD 302B

Unknown

Toxicity Statement

Acute toxicity data on four endpoints:

LC50 Fish 96 hour	> 420mg/L
EC50 Invertebrates 48 hour	5706 mg/L
EC50 Algae	Not Available
EC50 Bacteria	Not Available

Data on bioaccumulation: Not Expected to Bio accumulate

Conflict Minerals Statement

FD&C Yellow 5 does not contain Conflict Minerals.

Conflict Minerals currently identified under the SEC rule. These are the metal ores: cassiterite, columbite-tantalite, gold and wolframite, and the 3T derivatives which are tantalum, tin and tungsten. Please note that these substances are considered Conflict Minerals regardless of source country (that is, even if the Conflict Mineral is not sourced from the DRC region, it is still considered a Conflict Mineral).

Aflatoxin and Dioxin Statement

FD&C and D&C Dyes (including Yellow 6, Blue 1 and 2, and Red 40 and 3, and Yellow 10) both powder and granular are made from only synthetic ingredients. We can confirm that we do not intentionally add any Aflatoxin or Dioxin to the production process of products you source from DyStar Hilton Davis. Based on the chemical process and the raw materials used, no Aflatoxin or Dioxin is expected to be present. Since testing of those substances is not part of our standard routine analysis program, you will understand that we cannot formally guarantee the absence of these substances.
