To Our Customers:

Re: PCC USP Shelf Life

Specialty Minerals Inc.'s Precipitated Calcium Carbonate (PCC) ViCALity® and CalEssence® USP line of products are manufactured from limestone, and as such they are a stable inorganic mineral. The product recommended storage is dry conditions with ambient temperatures (avoid extremes to prevent condensation).

When these products are stored under good warehousing conditions, they will not have an expiration date. However, we advise that the material is tested after five years of storage to ensure that it still meets the intended user requirements.

If you have any additional questions, please feel free to contact me at (413) 662-9968.

Sincerely,

Parvin Golbayani
