

## **Food Grade Anhydrous 94-97% Calcium Chloride BRINERS CHOICE™ Anhydrous Calcium Chloride Pellets Halal Statement**

Occidental Chemical Corporation is pleased to advise that there are no additives incorporated into the manufacturing of the products listed above.

These products are produced at Occidental Chemical Corporation's Ludington, MI facility. Aqueous brine is extracted from natural underground deposits by a third party company. This company adds lime to the brine to precipitate magnesium as magnesium hydroxide, which is removed by filtration and clarification. The remaining calcium chloride-rich brine is transferred via pipeline to OxyChem's Ludington, Michigan facility, where it is concentrated by water evaporation. The concentrated brine is fed to a dryer where white, free-flowing pellets of low water content are produced. After sieving to control particle size distribution, the pellets are loaded into railcars for transport to a third party company for packaging and distribution.

OxyChem certifies that it does not use, nor intentionally add, any of the materials listed below in the manufacture of the products listed above:

- Human Consumable Alcohol (Ethyl Alcohol)
- Natural L-cysteine, extracted from hair or feathers
- Animal fats and/or extracts
- Bloods of any origin
- Blood Plasma
- Pork and/or other meat by-products

Additionally, it should be noted that human consumable alcohol is not utilized as a processing aid.
