Re: Shelf Life / Storage Conditions

To Whom It May Concern:

Please be advised that the Shelf Life of Niacet Corporation Acetate, Propionate and Stearoyl Lactylate products is generally considered to be indefinite. We do recommend a product retest after two (2) years from date of manufacture to ensure conformance to specification.

It is recommended that our Acetate and Calcium Propionate products be stored in a dry protected environment at ambient temperature and Sodium Propionate in a dry protected environment with <50% relative humidity. In addition to storing in a dry protected environment, we strongly recommend Stearoyl Lactylate products be stored below 80 degrees F (26°C) to avoid softening.

Sincerely,
Niacet Corporation

Dear Customer:

Please find our batch code interpretation below.

Batch code numbers are a 10 digit system generated unique code.
Batch code numbers are listed on our CoA's - e.g. 3000017976

This number is also located at the bottom of the package label under the bar code.
The number on the bar code label consists of the 10 digit batch code plus 3 additional digits which identify the pallet number within the batch.

Please make reference to the batch code number should you need to communicate any information to Niacet regarding any of our products.

Sincerely,
NIACET CORPORATION
