are manufactured by fermentation or synthesis. The products undergo several purification steps and are finally obtained in their highly pure form.

To the best of our knowledge, the manufacturing process of the above mentioned products does not leave any contaminants or by-products known to the State of California to cause cancer or reproductive toxicity as listed under Proposition 65 State Drinking Water and Toxic Enforcement Act (last update 19 March 2021), except of unavoidable traces of heavy metals.

Heavy metals are regularly tested. Typical data are available on request.
