To Our Valued Customers:

RE: Tate & Lyle Ingredients Products

Tate & Lyle works diligently to provide our customers with ingredients that are free from physical, chemical or microbiological contamination. These safeguards are based on the implementation of a quality management system and the utilization of a HACCP program to ensure the quality of our raw materials, ingredients, packaging materials and finished products. HACCP studies identify “critical control points” throughout the supply, production, packing and distribution chain, and the steps necessary to mitigate risks. One of the CCP’s includes sifting the product before bagging.
