To Whom It May Concern:

Re: **Organic Statement**

According to the USDA National Organic Program, salt cannot be certified as organic because salt is a mineral and not an agricultural product. In addition, 7 CFR 205.303(b)(1) and 7 CFR 205.304.(b)(1) state that: "Water or salt included as ingredients cannot be identified as organic".

In addition, salt does not contain nor is it derived from Genetically Modified Organisms (GMO's). It does not contain materials that are subjected to ionizing radiation. It is not derived from nor is it exposed to sewage sludge in processing.

However, if the salt is produced with an additive, the additive must be listed under 7 CFR 205.605 as a nonagricultural (nonorganic) substance allowed as an ingredient in or on processed products labeled as "organic" or "made with organic (specified ingredients of food group(s))."

Based on past acceptances, the following Morton Salt products may be considered for use in organic products. However, it is important to keep in mind that the acceptability of any ingredient in an organic product is dependent upon approval by an organic certification agency. It is the responsibility of our customers to seek approval of their ingredients, including salt and potassium chloride, from their organic certification agency when marketing an organic product.

Please let us know if we can provide further information about any of our products.
