### **EX-U.S. - CONTINUING PRODUCT GUARANTEES**

ICL Food Specialties (a division of ICL Performance Products LP) manufactures a variety of high purity food ingredients and specialty blends of food ingredients, including phosphates, phosphoric acid, sulfates, gums, and adipic acid. These food grade products are manufactured for use as ingredients in food according to the U.S. FDA regulations for Good Manufacturing Practices (GMPs), as set forth in 21 CFR 110, and meet the applicable laws and regulations for food ingredients in the U.S., specifically the Federal Food, Drug and Cosmetic Act (FDCA) and its amendments. In addition, our manufacturing sites are certified in the FSSC 22000 food safety program, which is part of the Global Food Safety Initiative – a worldwide standard for food safety.

While our food grade products may meet similar food GMPs and food regulations in other countries, it is the responsibility of our customers in those countries to make that definitive determination, particularly since compliance with those laws is often dependent on the specific food ingredient, food application, and usage level in the final food. If we can be of help with specific questions, please contact us.

A handwritten signature in black ink that reads 'Lori L. Klopf'.

Lori L. Klopf, Ph.D.
