FOOD GRADE CALCIUM SULFATE DIHYDRATE

HACCP STATEMENT

ACG Materials operates a calcium sulfate dihydrate plant in Bessie, Oklahoma. A HACCP analysis has been conducted and verified as part of our Food Safety and Quality program. The ongoing pre-requisite programs ensure good manufacturing practices are in place and verified on a daily basis. Any control measures ensure a safe product. The HACCP plan is assessed on an annual basis or if any changes occur which will impact processing procedures. If new equipment is added a reassessment will be undertaken at the time of installation.

- A. Raw material – ground gypsum rock
Composite samples from mining pad are ground and sent to outside lab for testing.
- B. Daily purity testing of milled product is performed on-site.
