ADM Lecithin Products

Shelf Life

To Whom It May Concern:

Fluid lecithin products should be kept at temperatures between 50-95°F (10-35°C). Exposure to freezing or near-freezing temperatures may promote separation of oil from the phospholipids. Separated product may be remixed under heat and agitation without loss of functionality. Avoid excessive exposure to light and moisture. The shelf lives are a minimum of the following when stored unopened in the original packaging.
